## flow-captor 4320.1x

The inline flow-captor type 4320.1x is a unique, precise metering flow switch. The inline flow-captor can be applied in all areas of industries where exact flow set-points are required. At the same time it "measures" the flow speed, even up to very low flows.

- precise switching sensor for water-based media up to 30 bar
- high accuracy even at low flow rates
- separate adjustments for range and set-point
- analog display of actual flow and display of the adjusted set-point
- LED display of output status
- ISO 9001 : 2008

### Control and display panel

LED chain for display of flow speed

Flashing LED for display of adjusted set-point

Potentiometer for set-point adjustment

Potentiometer for range adjustment from .2 to 3 m/s.

### example of operation

Measuring range adjusted to 3 m/s = 100% (9. LED)

Set-point adjusted to 50% of end value (5. LED)

Flow speed equates 75% (7. LED)

Green LED is ON:  
Flow rate is above the adjusted set-point

### The sensor tube

The sensor tube (length 200 mm) is made of stainless steel 316Ti and is an integral part of the inline flow-captor.

This series is available with sensor tubes in different sizes as 6 x 1, 8 x 1, 12 x 1, 18 x 1,5, 22 x 1,5 as well as 28 x 1,5 mm.

For aggressive media special sensor tube materials as Titanium and Hastelloy can be offered.

### Mechanical connection

Cutting ring couplings, to be ordered separately, have proven their value when mounting the sensor into pipe systems. By slightly tightening the swivel nut the v-shaped ring inside of the coupling cuts into the sensor tube wall and thus ensures a dense and reliable form closure.

### Free flow

The sensor element of the inline flow-captor is fitted to the out-side of the sensor tube. Since there is no element inside the tube, the sensor is non-intrusive to the flow. The robust housing is constructed of glass fibre reinforced PBTP (Ultradur®). The electronics housing includes a full resin encapsulation.
